## ACADEMIC PROJECTS

- ❖ **ServiceHub – Local Services Finder** (HTML, CSS, JavaScript, Tailwind CSS, PHP, MySQL)

Building a full-stack web application to help users find and book local service providers (electricians, plumbers, mechanics, etc.).

- Developed responsive **frontend interfaces** for users, service providers, and admin panels using HTML, CSS, JavaScript and Tailwind CSS.
- Implemented secure **user and service provider authentication**, including OTP verification and session handling using PHP.
- Designed and integrated **role-based access**: Users can book services, Service Providers can offer services, and Admins can manage the platform.
- Contributed to the **backend logic**, including service category management, account approval, and data handling.
- Collaborated with a team of 3 members, following structured development practices and version control (GitHub).
